Status: HEALTHY

TRIGGER PIPELINE & EVALUATE

Workspace Execution Idle

Select an outage preset or enter your custom live alerts details on the left, then click **Trigger Pipeline & Evaluate** to witness the real-time AI outcome.

Agent Daily Operational Summary Report

Active daily digest generated using server-side Gemini intelligence over all current cluster incidents.

"Today's production environment is experiencing significant degradation due to two active SEV-1 incidents involving database connection pool exhaustion on postgres-shard-3 and external Stripe API delivery failures. SRE and engineering teams are actively triaging both issues, with focus on restoring database access and monitoring third-party gateway circuit breakers. Core transactional workflows are currently impacted, and updates will be provided as mitigation progresses."
